LESSON NOTES
WORKSHEET 3 -2021

Subject: Basic Science

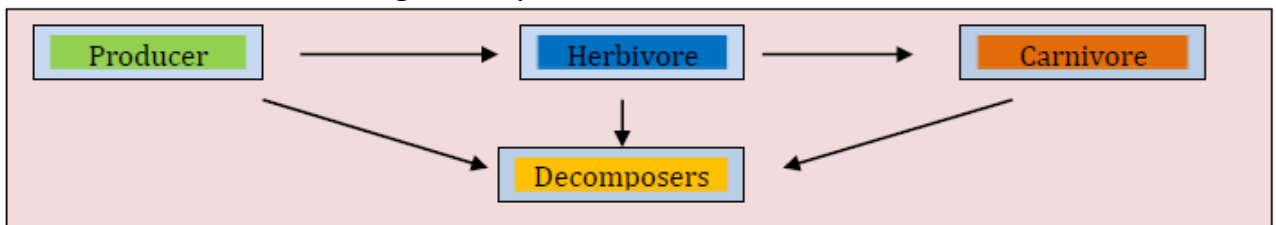

Year: 7

Name: _____

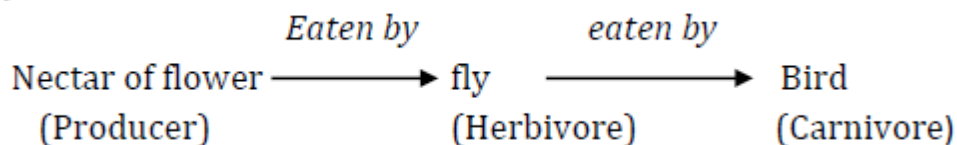

LESSON NOTES

FOOD CHAINS

- The inter-dependence of organisms in an ecosystem can also be shown in **FOOD CHAINS**.
- A food chain shows what an organism eats and it is then a source of food for another organism.
- All food chains follow the general pattern shown below:

- A food chain always begins with a producer or plant and the direction of the arrow shows how the organism is being eaten.
- The following example describes the possible food chain that could take place in a flower garden

Questions

1. All food chains begin with a **producer**
2. An example of a producer is **green plants**
3. Draw a food chain that can be found in
 - a. mangrove swamp

Mangrove plants → shrimps → small fish → crabs

- b. vegetable garden

cabbage → caterpillar → birds → hawk
