

UCIWAI SANGAM SCHOOL
SUPPLEMENTARY WORKSHEET

YEAR : 6**SUBJECT : ELEMENTARY SCIENCE**

STRAND	Strand 1 LIVING THINGS AND ENVIRONMENT
SUB STRAND	S6.1.3 BIODIVERSITY RELATIONSHIPS AND SUSTAINABILITY
CONTENT LEARNING OUTCOMES	S 6.1.3.1 USE PLANTS RESPECTFULLY AND CONSERVE PLANT LIFE

LESSON NOTES

CONSERVATION

Conserving our environment means safeguarding the habitats of plants and animals .The protection and safeguarding of our environment for the future generation is everyone’s responsibility. The school students and our communities need to be taught how to care for the environment. All living things depend on one another for their survival. For example, we depend on the plants for oxygen and food while plants depend on the carbon dioxide we breathe out for their food.

WAYS TO CONSERVE OUR ENVIRONMENT

Reducing waste disposal and dispose or using the proper ways of rubbish disposal. Planting more trees can also bring in more varieties of birds and insect to nest and feed. Practice and cultural ways of gathering food. Avoid pollution and over-harvesting. Everyone should follow the policies made by our government to protect our natural environment

ACTIVITY

1. Can you suggest some ways that would help to conserve and protect our endangered species?

2. Write some examples of animals that have become extinct from Fiji.

3. Explain the word ‘conservation’.

4. List some proper ways of rubbish disposal.

5. Find out about these organizations that help to protect our species.
