MATHEMATICS WORKSHEET 4
YEAR 6
(26th to 30TH July)

STRAND 2: M2 ALGEBRA

SUB STRAND: M2.2 EQUATIONS

Learning Outcome: M6.2.2.1 Identify and solve simple mathematical problems using given formulae.

LESSON NOTES

When writing algebraic expressions, we shorten or simplify the expression as much as possible.

e.g.

$2 \times b$ is written as **$2b$** and **$j \times k$** is written as **jk**

$y \div 2$ is written as **$y/2$** and **$c \div b$** is written as **c/b**

Also there are **regular equation** like $3 + 4 =$ and **algebraic equation** like $n + 2 = 7$

Example: $4 + 4 + 4 + 4$ is same as 4 lots of 4 or 4 times 4

Important to note that $m \times 8$ is always $8m$ and not $m8$

Activities

1. a. Write $4 \times t$ in a shorter way.
- c. Write $2 \times r$ in a shorter way
- b. Write $s \div 6$ in another way
- d. Write $g \div 7$ in another way

2. Solve the following and circle the correct answer.

- i. $5 \times (a + 3)$
- a. $(5 + a) \times (5 + 3)$ b. $5a + 15$
- ii. $3k - k$
- a. 3 b. $2k$
- iii. $3 \times c \div b$
- a. $3c/b$ b. $3cb$
- iv. $r + 5 = 12$
- a. 7 b. 17

2. Make us feel a sense of belonging and support.
3. It increases our self-confidence.
4. Introduces us to positive hobbies and interests.
5. It strengthens positive habits and attitudes.

Problems that may arise if you are influenced by peer pressure

Negative peer pressure

- to do something that places a teen in danger or is hurtful to others is definitely cause for concern.
- For example, your peer want you to steal your parents' money to buy pornography material.

Ways of avoiding peer pressure

1. Hang out with friends who can assist you.

2. Go out with a group of friends rather than going alone.
3. Introduce your friends to your parents.
4. Invite your friends to your home.
5. Think of what you would say in advance in case someone tries to pressure you.
6. Always carry money for a telephone call or cab in case you feel uncomfortable.
7. Be ready to call your mum, dad or a friend to pick you up if you need to leave your friend's house.
8. Say “no” and mean “no” if that's how you feel.

Examples of Positive Peer Pressure

Positive peer pressure is when someone encourages you to do something that is good for you.

<p>Strand:SS3 PLACE & ENVIRONMENT</p> <p>Sub-Strand: SS6.3.1 FEATURES OF PLACES</p> <p>CLO: SS6.3.1.1 Recognize and apply effective mapping skills that demonstrate good understanding of map reading conventions.</p>	<p>Lesson:1 Achievement Indicator:</p> <ul style="list-style-type: none"> • Draw a simple sketch map • Identify locations using mapping conventions. • Know the five essentials of a map. • Read the map using simple keys. 
<p>Heading:</p>	<p>Notes:</p>
<p>What is a Map?</p>	<ul style="list-style-type: none"> ➤ A map is a sketch drawing of a place as seen from above. There are different types of maps that we use. ➤ Mental maps are maps that we make up in our minds. ➤ Sketch maps are drawn to help someone locate a place like a school, village or a home. ➤ Maps have special features that help us to create and read a map. These special features are called conventions. Every map has five main conventions which make it easier for us to read and understand what is drawn. ➤ i) Title - It gives us a clue about the map. Example: Location of Solove Area ➤ ii) Direction - The direction on a map is usually shown using an arrow head pointing north. If there is no direction given, the north point is always at the top of the map. A compass is the instrument that gives us the gives direction. ➤ iii) Scale and distance- It shows how the distances on the map relate to the distance in real world. The purpose of a map scale is to show the relationship between distances on a map and real distances on the ground. There are three ways to represent a scale. A word statement uses words to describe the scale. For example "One centimetre on the map represents one kilometre on the actual ground"

	<ul style="list-style-type: none"> ➤ A representative fraction/ratio scale uses numbers and the units are the same. For example: 1:1000 or 1/1000 meaning one centimetre on the map represents one centimetre on the actual ground. ➤ iv) Line or Linear Scale -it is shown using a number line which says how much one centimetre is represented by a given distance on a map. ➤ v) Key/Legend - It explains the different symbols used to draw the map. Another term for the map key is the legend. Symbols and colours are used to show different features.
Vocabulary: mental, sketch, conventions	Definitions: <u>mental</u> – of the mind, <u>sketch</u> – rough drawing, <u>conventions</u> – a way in something is usually done.
Activity: Answer the question	Give the five conventions of a map. <hr/> <hr/> <hr/> <hr/> <hr/>
