Content Learning Outcome	Examine strategic positions of Pacific Islands in the world, and discuss their attributes as part of the Global village.

NOTES

World Climate Zones

- Climate is the characteristic condition of the atmosphere near the earth's surface at a certain place on earth. It is the long-term weather of that area (at least 30 years).
- This includes the region's general pattern of weather conditions, seasons and weather extremes like hurricanes, droughts, or rainy periods.
- Two of the most important factors determining an area's climate are air temperature and precipitation e.g., rainfall.
- The climate of a region will determine what plants will grow there, and what animals will inhabit it.

- Latitude is always given before longitude
- Lines running East-West across the map are called parallel of latitudes.
- The Equator is the longest line of latitude.

ACTIVITIES

1. How would you describe the areas around the Arctic and Antarctic circles?
Colder region
2. Between which two lines of latitude do you find the tropical countries?
Between 23.5 degrees North and 23.5 degrees South
3. Where are the temperate countries located?
Between 23.5 degrees North and 23.5 degrees South
