SUBJECT: Basic Science Worksheet 5 - SOLUTION

STRAND	Matter
SUB STRAND	Materials – Methods of Separating Mixtures
CONTENT LEARNING OUTCOME	Account for the different properties of mixture and compound and discuss the different methods of separating their components.

Exercise

We made a sieve using layers of mosquito netting. Using this sieve we graded the sand into 4 grades. We used a hand lens to observe the sand grains.

Fill the table below as you make observation.

Grade of Sand	Description of Grains	Diagram of Grains	Size of spaces (small, medium, large)
1	Coarse		large
2	Medium		Medium
3	Fine		Medium
4	Very fine		Small

Exercise

We separated water from the sand by a method called decanting. The sand was left in the beaker because it was too heavy to be carried in the water.
