

**SUVA SANGAM COLLEGE**

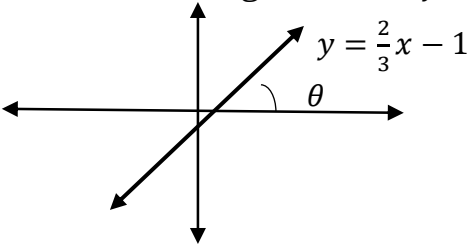

**YEAR 12**

**MATHEMATICS**

**WORKSHEET 7**

Strand 4	Coordinate Geometry
Sub-Strand	<b>12.4.1 Applications of coordinate geometry</b>
Content Learning Outcome	Explore and apply the concepts of coordinate geometry <ul style="list-style-type: none"><li>• Calculate distance, midpoint and gradient</li><li>• Determine the relationship between gradient of a line and the angle it makes with the positive x – axis.</li><li>• Determine the equation of a line.</li></ul>
Reference from Text	Pg. 125 to 133

**Questions**

No.	<b>CONCEPT IN BRIEF:</b> 1. $d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$ 2. $Mid\ point = \left( \frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2} \right)$
1.	A diameter intersects the circumference of a circle at the points (-2,6) and (6,2). Find the a) length of the diameter b) length of the radius c) coordinates of the center of the circle.
	<b>CONCEPT IN BRIEF:</b> 1. $m = \tan\theta$
2.	Calculate the angle the line $y = \frac{2}{3}x - 1$ makes with the positive $x - axis$ . 
	<b>CONCEPT IN BRIEF:</b> 1. $m = \frac{y_2 - y_1}{x_2 - x_1}$ 2. Equation of the line through $(x_1, x_2)$ and $(y_1, y_2)$ is $y - y_1 = m(x - x_1)$
3.	A line passes through the points (5,1) and (3, -2). a) Calculate the gradient of this line. b) Determine the equation of the line in the form $y = mx + c$
