## WEEK 10

# School: <u>Ba Sangam College</u> Subject: Computer Studies

# Year / Level: <u>12</u> Name of Student: \_\_\_\_\_

| Strand                   | 1 – Computers and Applications                           |  |
|--------------------------|--|--|
| Sub strand               | 1.5 Computers and Networks                               |  |
| Content Learning Outcome | Describe different types of communications and networks, |  |
|                          | network setup and explore the security measures.         |  |

#### Some careers in this field

#### Network administrators

- Oversee the computers in the company's system.
- They manage and ensure the network runs smoothly and uninterrupted.
- They connect all hardware and software and set up all programs, such as everyone's email, to the computer system.
- They work with individual users, troubleshoot crashes and slow performance and are responsible for developing an emergency back-up system to preserve essential data.
- They must record all system errors and how they were repaired.
- They must also set up security measures to keep unauthorized users from accessing company files.

#### Network systems engineers

- ✤ Are responsible for setting up the network infrastructure the administrator oversees.
- Engineers maintain and watch over the security systems the administrator set up, and work with them to develop firewalls and back-up systems to the main network server.
- Engineers are responsible for the configuration of the network, maintaining all the equipment and logging any maintenance performed.
- The engineer is the fine tuner to the network system

#### Network computer programmers

- Are administrative-style jobs that create and design critical data structures for each computer
- They analyse the system's software requirements, develop new applications and maintain existing ones.

- They are there from start to finish on all computer applications.
- They literally tell the computer what to do and how to grasp the information given.
- The programmer must meet all system standards, creating the proper codes and communicate well with perfect understanding.
- Programmers must also have exemplary presentation skills.

#### Network systems managers

- Guide, manage and supervise the entire Internet and computer operation.
- Managers are in charge of the workplace, assign projects and programs to their employees and give reports to upper management.
- They are responsible for each department in the operation to include many programmers, analysts and technologists.
- They must be educated in every area of the computer network system.
- Managers must ensure the availability of each department's equipment, order and allocate resources as necessary and be familiar with industry developments and more

#### Network service technicians

- Identify and fix network troubles
- They troubleshoot components and hardware such as coaxial and fiber-optic cables
- They must have extensive knowledge in Internet connections and in linking computers within a network

- They plan and analyse cost for the company's computer network system and determine correct layouts, configurations and connection devices
- They must be abreast on modern terminology and be able to resolve any problem within the computer system

#### ACTIVITY

1. Differentiate between network engineer and network administrator (2 marks)

## 2. Copy and complete the table given below (10 marks)

| Career                       | Two responsibilities |
|------------------------------|----------------------|
| Network administrators       |                      |
| Network systems engineers    |                      |
| Network computer programmers |                      |
| Network systems managers     |                      |
| Network service technicians  |                      |
