## WORKSHEET 21

School: Ba Sangam College

Name: \_\_\_\_\_

**Subject: Home Economics** 

Year:10

Strand	HEC 10.3 CLOTHING AND TEXTILES	
Sub strand	HEC 10.3.6 Processes and Techniques	
Content Learning Outcome	<b>HEC 10.3.6.1</b> Show competency in applying advanced sewing techniques in constructing an article	

### **ADVANCED TECHNIQUES AND PROCESSES**

## **DISPOSING (REMOVAL) FULLNESS**

- various ways of shaping and draping fabric to give a better fit and appearance to a garment.
- There are six common methods for disposing fullness.
  - 1. Smocking.

Embroidery stitches are worked on the surface of gathers to form a pattern.

Smocking is particularly attractive for children's garments.

Basic smocking stitches include:

Stem stitch	Mock chain stitch	Wave stitch	Cable Stitch
and the second	action		

### 2. Tucks

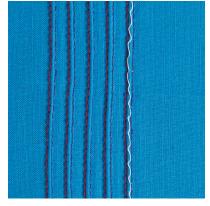

- is made by stitching a fold of fabric parallel to the fold line.
- are also used as a decorative feature.
  - i. Mark the stitching lines of each tuck.
  - ii. Remove pattern. ii. Fold tuck to inside or outside of the garment, according to design. iii. Match the stitching lines, press and baste in place.
  - iv. Stitch tuck and remove basting stitches.

## Pressing tucks

• Press each tuck flat as it was stitched. If pressing from right side, be sure to use a press cloth so as not to mark the fabric.

Sangam Education Board – Online Resources

• Then press all tucks in the direction in which they will be worn.

#### 2. Gathers

- Gathering is perhaps the most common method used to dispose of fullness.
- A wider piece of fabric is drawn up along a double row of loose stitching so that it fits a smaller piece.
- An even distribution of gathers denotes good gathering.

To work gathers	
<ul> <li>Use the longest stitch length.</li> <li>Machine two rows of gathering stitches, one</li> <li>0.2 cm below the fitting line and the other</li> <li>0.2 cm above it</li> <li>Leave the threads long enough to pull</li> </ul>	first row of gathering stitches (0.2 cm below the fitting line the fitting line
<ul> <li>Pull the two bobbin threads until the fabric is drawn up to the correct length.</li> <li>Wind the threads round a pin to secure them.</li> </ul>	Wind three mound is particular to the second
<ul> <li>Distribute the gathers evenly.</li> <li>Attach the gathered section to thetop section.</li> </ul>	top section

#### 4. Pleats

are folds of fabric, stitched at one end and pressed flat in position and its width varies according to the style.
 There are three times of places, which excist in dispessing fullness.

There are three types of pleats, which assist in disposing fullness.

	Type of Pleat	Process of formation	Illustration	Sample
1	Knife pleats	Folds face in one direction.	906	
2	Box Pleats	*Two knife pleats face away from each other. *The folds of the pleats meet on the wrong side.	252525	
3	Inverted Pleats	*Two knife pleats face each other on the right side. *Usually used at the centre front or centre back of a garment.	52	

#### ACTIVITY

State the difference between tucks and pleats.	(2 marks)
Identify the use of tucks.	(1 mark)
	(
What denotes a good gather?	(1 mark)
Name and describe the three types of pleats. a.	(6 marks)
b.	

c.
