STRAND 4	Earth and Beyond
CONTENT LEARNING OUTCOME	Observe and record information overtime about the major visible features of the day and night sky.
TOPIC	<u>Our Solar System</u>

Lesson Notes

The Earth

Earth is the third planet from the sun .It takes 365 days for earth to move around the sun.We call this one year.The earth also spins around its centre once a day.

When our side of the earth is facing the sun it is day for us.

When the sun is facing the opposite side of the earth it is night for us.

Features of Daytime Sky

Every morning the sun rises, bringing light and warmth to us and our world. It is day time. The sun rises in the east. In the evening it sets in the west. It becomes dark and it is night. It is the earth and not the sun which is moving. The sun comes into our view and out of sight as the earth spins. Without the sun's light and heat the earth will be dark and cold. Plants need sunlight to make their food. Animals cannot make their food. They must eat plants or other animals in order to live. So without sunlight there would be no life on earth.
